

NAUTIC-ICE DECK

Maximize the use of your rink floor and increase your facility revenues by holding Concerts, Truck Pulls, Trade Shows, Graduations, Basketball Games, and many other dry floor activities, even when the ice is in place.

Nautic-Ice Deck by *Maple Leaf Gold* converts your ice surface in just a few hours to a warm dry floor that can be used for these and many other activities.

Being 40% lighter than plywood or paper based sheeting, Nautic-Ice is quickly and easily handled by facility conversion staff. The sheeting does not warp, is extremely strong and rigid, does not compress, is water proof, and has virtually no expansion and contraction. And Nautic-Ice provides excellent insulation properties to protect your ice and keep feet warm.

Nautic-Ice has a highly durable, textured, non slip finish that is

resistant to moisture, molds and fungus, and typical event traffic and spills. The non stick surface is easily cleaned with hot water and a mop, or typical commercial cleaners and steam can be used for more stubborn residue.

Fiberglass reinforced panels outlast conventional materials and provide years of use. Available in standard 1/2" and 1" thick sheet, Nautic-Ice provides a cost effective and economical option for covering your rink surface, and protecting both the ice and facility users.
